

Welcome Your Guests Back with Clean and Safe Indoor Air

New guidelines for the hospitality and hotel industry are in place due to the COVID-19 outbreak. Your guest will expect an environment that is clean and safe.

One of the main reopening recommendations is monitoring and maintaining proper IAQ through HVAC filters and systems. Documented to be airborne, contagious viruses can survive in small droplets for several hours. Keeping your HVAC system maintained is important, but it's not enough. Killing the sub-micron virus cells that pass through filters and remain airborne is the only way ensure a healthy space.

Plasma Air's bipolar ionization technology replicates nature's process for cleaning the air by attaching ions to airborne pathogens, such as viruses, causing a chemical reaction on the surface of the cell membrane. This deactivates the viruses, rendering them harmless, so they can no longer spread or cause infection.

The Plasma Air 600 Series effectively reduce and neutralize indoor air pollutants such as viruses, bacteria, odors, dust, and particulates.

This simple solution can be easily installed into PTACs or Fan Coil Units by the hotel maintenance staff or a local contractor in a very short period of time.

- Silent and invisible
- Independently proven safe and effective for continuous use
- A variety of products to install in any existing hotel HVAC system
- Requires no replacement parts
- Meets UL867 standard for ozone and safety

This current situation will end but relationships will last, and hoteliers have to do everything they can to keep customers' trust. Hotels are primarily focused on creating the ideal environment for a guest's comfort, safety, and relaxation during their stay. True air purification is at the top of the list and can be marketed to customers as a complement to other things that will be done such as deep cleaning protocols, touchless devices and social distancing.

ABOUT PLASMA AIR

Plasma Air is the leading innovator in indoor air quality by manufacturing HVAC and portable air purification products that result in healthier, more productive indoor environments in institutional, commercial, residential and industrial applications. The Plasma Air HVAC purification systems use highly efficient plasma ionization technology to neutralize indoor air pathogens and pollutants. Plasma Air systems have been proven in thousands of applications to provide the highest level of air quality improvement for airports, train systems, schools, hotels, casinos, arenas, offices and homes.
